

Hello and thank you for downloading my FREE AfterEffects project template!

You can edit the text by changing the content of "Text_01_Precomp" & "Text_02_Precomp" in the project window.

The font I used "OptimusPrinceps" is available FOR FREE on www.dafont.com
<http://www.dafont.com/optimusprinceps.font>
But you can use every font you like in the precomps.

The lens flare effect is produced with the excellent plugin "OpticalFlares" by Andrew Cramer, available on <http://www.videocopilot.net>. But specifically for this project template the OpticalFlares effect is prerendered, so you don't need to have the plugin. For those who own OpticalFlares, there are the original effect layers for further customizations.

So, if you liked this project – check out my webside <http://www.AEdude.com> for more high quality After Effects project templates!

Have fun!

Andi
