

Swing Tilt Instructions

When you first open the project, you will see five folders in the Project window. We are only concerned with the Edit Comps, Final Comps, and Image/Video folders.

The first step is to import your images and video into the project. In the Project window, highlight the Image/Video folder by clicking on it once. Next go to File, Import, File.... and find the images or videos you would like to use and click Open. Your images and videos will now be located in the Image/Video folder.

Now, you are ready to place your images or videos into the project. In the Edit Comps folder double click either the Footage HD or the Footage SD comp, depending on your footage. the Video Comp. After it opens in the timeline, drag your video into the timeline.

Next, in the project window, find the Final Comps folder and roll the arrow down next to it. Double click on either the Final HD or the Final SD depending on the footage you imported. After it opens in the timeline, highlight the "Effects" layer by single clicking it and press "E." Adjust the different settings to your liking.

You are now ready to render! With your timeline selected, click Composition, Make Movie. Adjust the render settings to your liking and click render.
