

SmallHD OS3 Firmware v3.6.1

October 7th, 2019

CHANGELOG

Bugs Fixed:

- Main 6 Arri Buttons should open correct menu
- Resolved a RED playback issue that caused the monitor to freeze
- Iconography should no longer be missing from the Wireless Pairing menus
- Fixed a bug that was occasionally causing the joystick to fail after loading a profile
- REDwidegamutRGB/3G10 can now be selected as an input color space

Known Bugs:

- RED play button freezes after scrubbing
- Gemini: Low Light vs Standard ISO control is not supported
- RED Tree Menu operation sometimes sluggish
- 'Play' button in RED Playback mode occasionally fails
- UI Sometimes freezes when SD card is removed
- RED Compression at high FPS displays incorrectly
- RED Battery % not always accurate
- RED Playback Frame Rate displays rounded up on drop frame rates. (i.e. 23.98p displays as 24p)
- RED Tree Menu Selections do not default to highlighted option
- RED: Anamorphic Setting does not appear in Sensor Status (found in Anamorphic SubMenu)
- ARRI - Can't enter playback when last recorded clip doesn't match current project resolution

Recommended Practices

- *Connecting to a RED camera sometimes fails. If this happens, the user might need to cycle the USB cable attached to the monitor. Also, troubleshooting tips: <http://guide.smallhd.com/m/74610/l/1142875-red-camera-control>*
- *Connect external recorders directly downstream of your source device (i.e. camera), not downstream of the monitor.*
- *Wireless Pairing connection issues can be solved by using the troubleshooting tips at <http://guide.smallhd.com/m/74610/l/916337-wireless-pairing-teradek-transmitter-to-703-bolt>*
